

Module C: Social Consensus

Functional Requirements:

- The system shall allow users to create a poll with a question and multiple options.
- The system shall allow users with different roles to vote on available polls.
- The system shall ensure that the user can vote once per poll.
- The system shall update poll results after every user's vote.
- The system shall allow the poll manager to set deadline for voting.
- The system shall allow the poll manager to delete it.
- The system shall allow users to send messages to each other.
- The system shall support threaded replies to specific messages.
- The system shall allow users to add items (text / images / notes) to a mood board.
- The system shall allow authorized users to send broadcast messages to all users.

Use cases:

1. Manage poll. -> create, vote, add an option, delete.
2. Manage messages. -> send, edit, view, delete.
3. Send broadcast message.
4. Add items to a mood board.

Name	UC 01 - Create Poll
Initiator	User
Goal	Allow a user to create a new poll with a question and multiple options
Preconditions	- User is logged into the system - User has permission to create a poll
Postconditions	- Poll is created successfully - Poll is stored in the system - Poll is visible to users for voting
Main success scenario	1. User selects "Create Poll" option 2. System displays a poll creation form 3. User enters poll question 4. User adds multiple options 5. User submits the poll 6. System validates the input 7. System saves the poll in the database 8. System displays success message 9. Poll becomes available for voting

Name	UC 02 - Vote on Poll
Initiator	User
Goal	Allow a user to vote on a poll
Preconditions	- Poll exists - User is part of the trip - Poll is still open
Postconditions	- Vote is recorded - Poll results are updated
Main success scenario	1. User opens a poll 2. System displays poll options 3. User selects an option 4. User submits vote 5. System checks if user already voted 6. System records vote 7. System updates results 8. System confirms vote

Name	UC 03 - Add Option to Poll
Initiator	Poll Creator
Goal	Add Option to Poll
Preconditions	- Poll exists - User is poll owner
Postconditions	Option is added successfully
Main success scenario	1. User opens poll 2. User selects add option 3. User enters option 4. System validates input 5. System saves option 6. Poll is updated

Name	UC 04 – Delete Poll
Initiator	Poll Manager
Goal	Allow deletion of a poll
Preconditions	- Poll exists - User has permission
Postconditions	Poll is removed
Main success scenario	1. User selects poll 2. User clicks delete 3. System asks for confirmation 4. System deletes poll

Name	UC 05 - Send Message
Initiator	User
Goal	Allow a user to send a message to other users
Preconditions	- User is part of the system - User has access to chat
Postconditions	- Message is sent successfully - Message is visible to other users
Main success scenario	1. User opens chat 2. User writes message 3. User sends message 4. System validates message 5. System stores message 6. System delivers message 7. Message appears in chat

Name	UC 06 – Edit Message
Initiator	User
Goal	Allow user to edit a message
Preconditions	- Message exists - User is sender
Postconditions	Message is updated
Main success scenario	1. User selects message 2. User edits content 3. User saves changes 4. System updates message

Name	UC 7 – Delete Message
Initiator	User
Goal	Allow user to delete a message
Preconditions	- Message exists - User is sender
Postconditions	Message is removed
Main success scenario	1. User selects message 2. User clicks delete 3. System confirms 4. System deletes message

Name	UC 08 – View Messages
Initiator	User
Goal	Allow user to view chat messages
Preconditions	User is part of chat
Postconditions	Messages are displayed
Main success scenario	1. User opens chat 2. System retrieves messages 3. System displays messages

Name	UC 09 - Send Broadcast Message
Initiator	Authorized User
Goal	Send a message to all users
Preconditions	User has broadcast permission
Postconditions	Message is delivered to all users
Main success scenario	1. User selects broadcast option 2. User writes message 3. User sends message 4. System verifies permission 5. System sends message to all users 6. All users receive message

Name	UC 010 - Add Item to Mood Board
Initiator	User
Goal	Allow a user to add text / images / notes to a mood board
Preconditions	User is part of the system
Postconditions	- Item is added successfully - Item is visible on mood board
Main success scenario	1. User opens mood board 2. User selects add item 3. User uploads or writes content 4. System validates input 5. System stores item 6. System updates mood board
